## ADFER DYFI PROJECTS LINK US WITH THE NATURAL WORLD

**WILD AT HEART...** THE Adfer Dyfi projects are nearing completion and such a range of things have been done across the Catchment. **These include:**

**BEE BANKS** – dozens of bee banks have been created which will be ideal for summer nests and winter-hibernating bumble bees (below right).

**HERBAL LEYS** – acres of longer-rooting herbal leys have been planted for better plant and soil health with food for pollinators (see below).

**LEAKY DAMS** – leaky dams are in place to help slow the flow along with water monitoring systems (see last edition).

**CONSERVATION GRAZING** – the SSSI (Site of Scientific Interest) on the Dyfi has been helped by a test of the practicalities of controlled grazing plus Masterclasses held on regenerative farming (right).

**RIVER LIFE** – pupils have heard the history, seen dairy farming, tasted the cheese, walked in nature (top) and felt the bog shake when they jumped on it!
